Art Unit:

***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. **Claims 7-8**, are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding **Claims 7-8**, the limitation “*control means for allocating a network address to the recognized to communication system under which the communication terminal apparatus can currently be reached and communicating control information via the selected base station to a control network address for influencing an activation/deactivation condition related to another communication system not having the selected base station the control network address being stored in a memory, of the communication terminal apparatus, wherein the network address communicated to the control network address stored in memory is used for assisting in handling a call intended for the communication terminal apparatus but directed to a communication system via which the communication terminal apparatus cannot be reached*” on page 1 in claim 7 lines 7-14, and on page 2 in claim 8 lines 8-14, is indefinite, it is not clear why the network address being stored in a memory of the mobile, in order for controller to select another network that is not currently used. Therefore correction are required.

***Claim Rejections - 35 USC § 103***

Art Unit:

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. **Claims 7-12** are rejected under 35 U.S.C. 103(a) as being unpatentable over Ault et

al.(US Patent 5,754,542) in view of Nishida (US Patent Number 5,995,828).

Regarding **Claims 7-8**, Ault teaches a communication terminal apparatus for wireless communication with a selected base station of one of at least two communication systems (Column 1 lines 39-46), the communication terminal apparatus being logged on as ready to receive the selected base station, the communication terminal apparatus comprising: recognition means for recognizing one of the at least two communication systems, the recognized communication system having the selected base station (Column 2 lines 5-9); and control means for allocating a network address to the recognized to communication system under which the communication terminal apparatus can currently be reached and communicating control information via the selected base station for influencing an activation/deactivation condition related to another communication system not having the selected base station (Column 4 lines 24-31, Column 5 lines 5-39). Ault fails to teach **wherein the network address communicated to the control network address stored in memory is used for assisting in handling a call intended for the communication terminal apparatus but directed to a communication system via which the communication terminal apparatus cannot be reached. However**

Art Unit:

Nishida teaches a method wherein a communication system move from one network to another network, for identifying each network, uses the network address. Nishida system having the first network address for receiving telephone calls from the first base station in the first communication zone and a second network address different from the first address network for receiving telephone calls from the second base station in the second communication zone (column 11 lines 30-45). Therefore, it would have been obvious to ordinary skill in the art at the time the invention was made to provide above teaching of Nishida to Ault, in order to enable the user to establish communication between different networks.

Regarding **Claims 9-10**, Ault teaches a communication terminal apparatus wherein the control information activates a call redirection relating to a subscriber address under which the communication terminal apparatus can be reached via another communication system not having the selected base station, given corresponding readiness to receive the another communication system by the communication terminal apparatus (Column 2 lines 14-25).

Regarding **Claim 11**, Ault teaches a communication terminal apparatus wherein the memory stores a control network address of a mobility server (Column 4 lines 15-18).

Regarding **Claim 12**, Ault teaches a communication terminal apparatus wherein the memory stores a plurality of control network addresses of a plurality of communication systems, and the communication terminal apparatus further comprising: selection means for selecting at least one control network address of another communication system not having the selected base station (Column 2 lines 15-25).
